Pet Safety During Home Visits

Helping Us Provide Safe, Quality Care in Your Home

Before Your Visit

- Let us know if you have pets in the home.
- Tell us if a pet has a history of biting, scratching, jumping, or protective behavior.
- Place pets in a separate room, crate, cage, or other secure area before your clinician arrives.
- Keep pets secured for the entire visit.

Why Is This Important?

- Prevents bites, scratches, trips, and falls.
- Prevents disruptions during patient care.
- Helps keep medical equipment and supplies clean.
- Reduces delays in treatment.

During the Visit

- Keep pets away from the care area.
- Keep pets from jumping on or crowding the clinician.
- Keep pets away from medical supplies and equipment.
- Allow the clinician to focus on your care without interruptions.

If a Safety Concern Arises

Our clinicians have the right to work in a safe environment. If a pet becomes a safety concern, the clinician may ask that the pet be secured, delay the visit, reschedule the visit, or leave the home until the situation is resolved.

Thank You!

We love pets, too! By keeping them safely secured during visits, you help ensure that your care can be provided without interruption.

Quick Reminder: Before every home visit, please place pets in a secure area and keep them there until the clinician leaves.
